

A scatter plot showing the relationship between Ozone (x-axis) and an unlabeled y-axis variable. The x-axis ranges from 0 to 150, and the y-axis ranges from 0 to 100. The data points are black dots. The plot shows a positive correlation, with a dense cluster of points at low Ozone values (0-50) and a more sparse distribution at higher Ozone values (50-150). The points generally follow an upward trend, suggesting that as Ozone increases, the y-axis variable also tends to increase.
